autumo ifaceX 3.0.0

ifaceX is a secure and scalable enterprise interface exchange and monitoring platform that transfers big data from one endpoint to another, such as REST APIs, databases, files & mails, Clouds (e.g. Google, AWS S3), HubSpot, PayPal, Spotify and financial APIs, etc. Moreover, it simply executes any process or even programming code that can be monitored as well. Processing can be customized all-including flexible target field mapping based on formulas and data mapping through a drag'n'drop user interface.

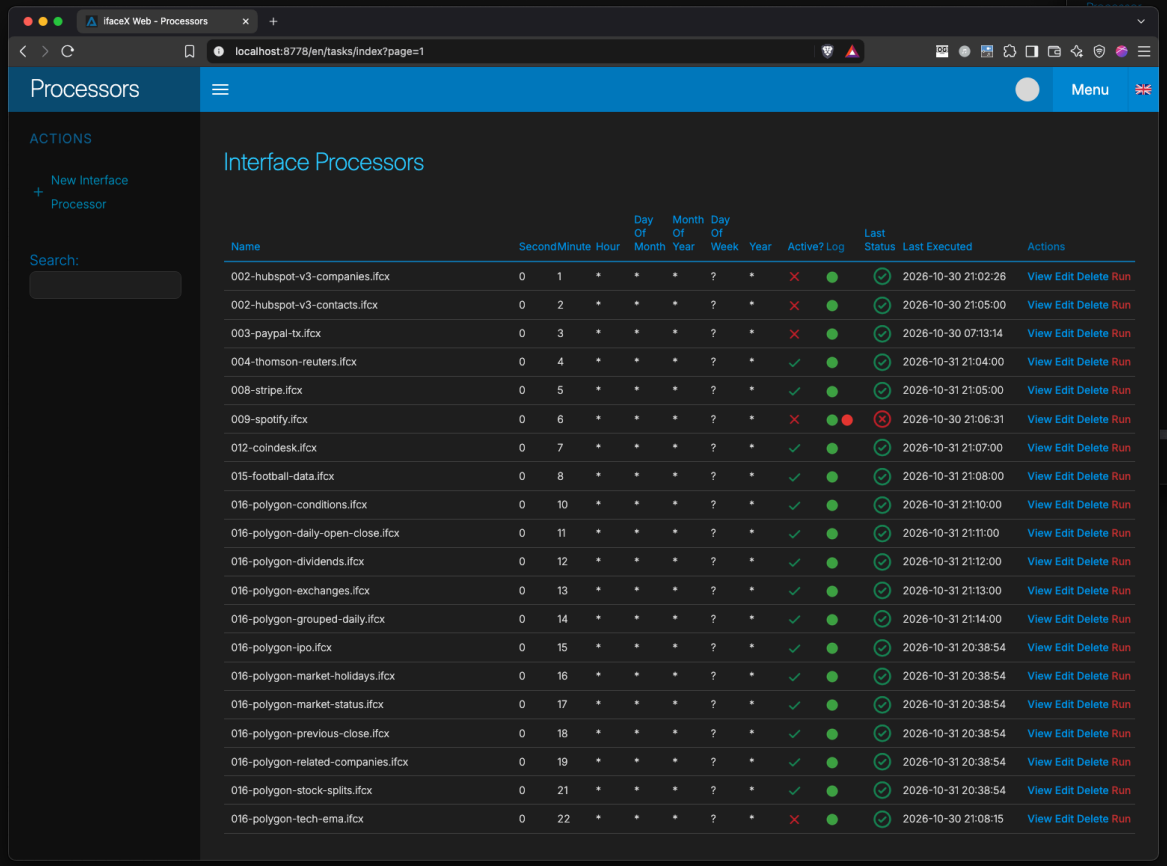

ifaceX

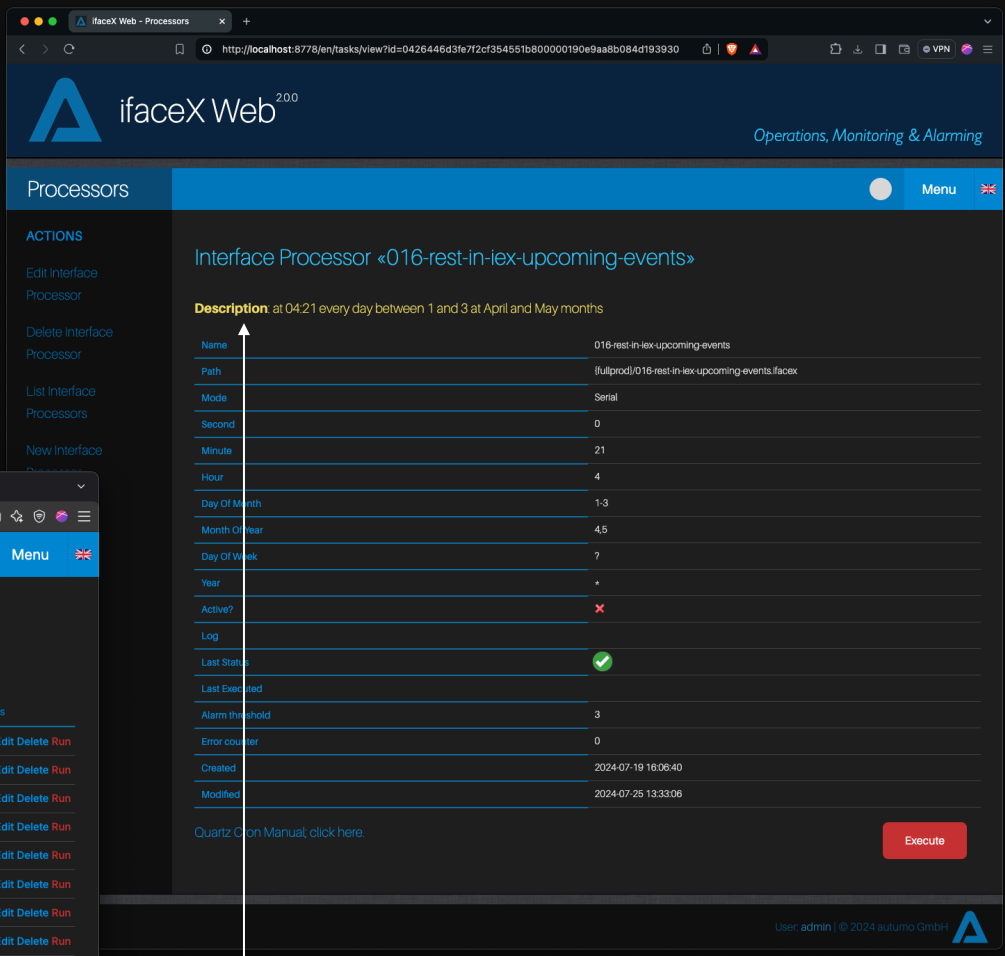

- Run your Interface Processors (IPs); all at once, as many as you want or a single IP
- Execute the IPs in different modes (serially/atomic/parallely) & configure processing
- Besides sending data to REST, databases, CSV and mails etc., you can run and any system program or code

ifaceX Scheduler

- Run ifaceX as a server that executes IPs with an internal scheduler (Quartz Scheduler)

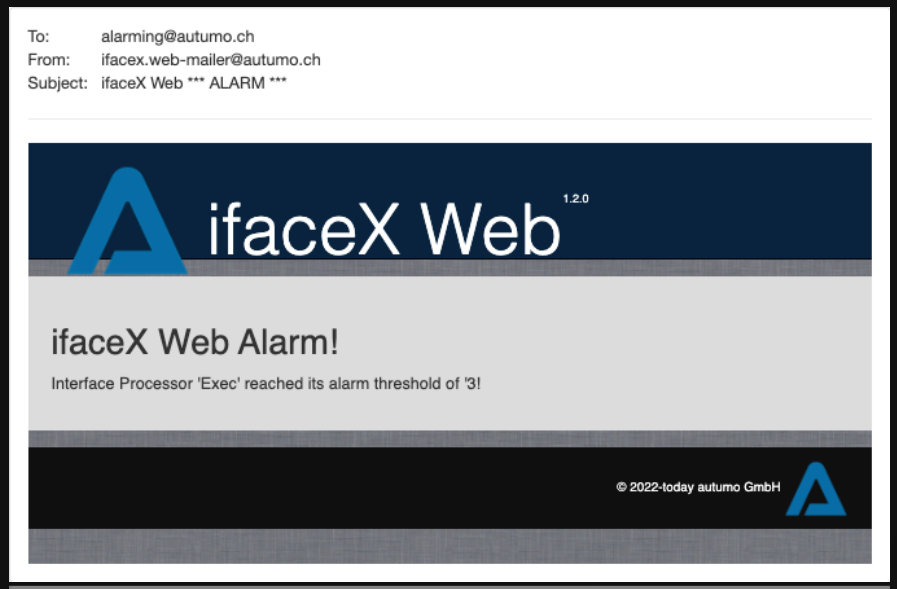

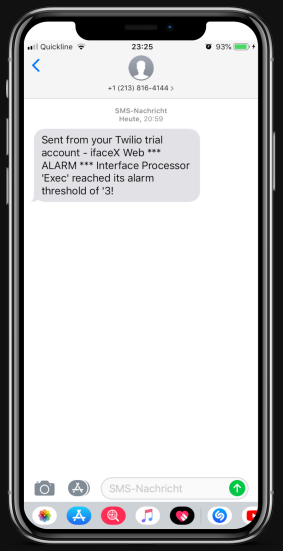

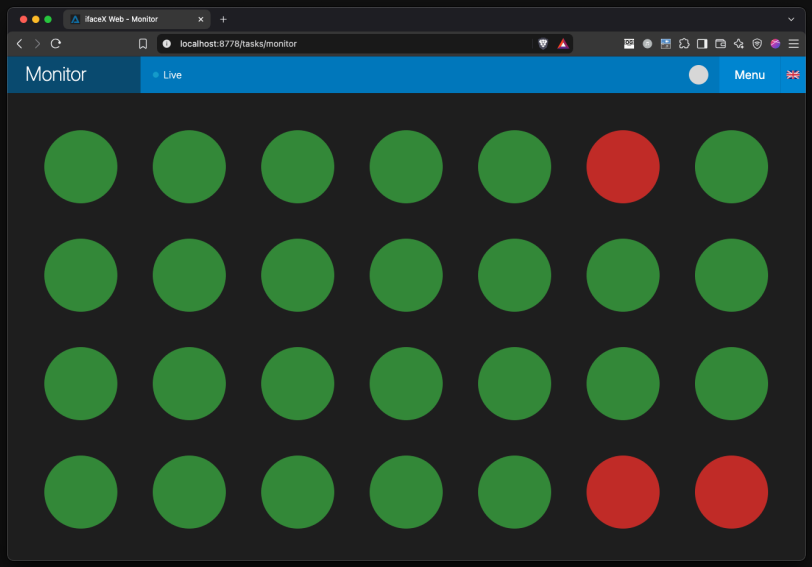

Description:
Every 10 seconds at 48 minute at 4 hour every day between 1 and 3 at April and May at 2027 and 2031.

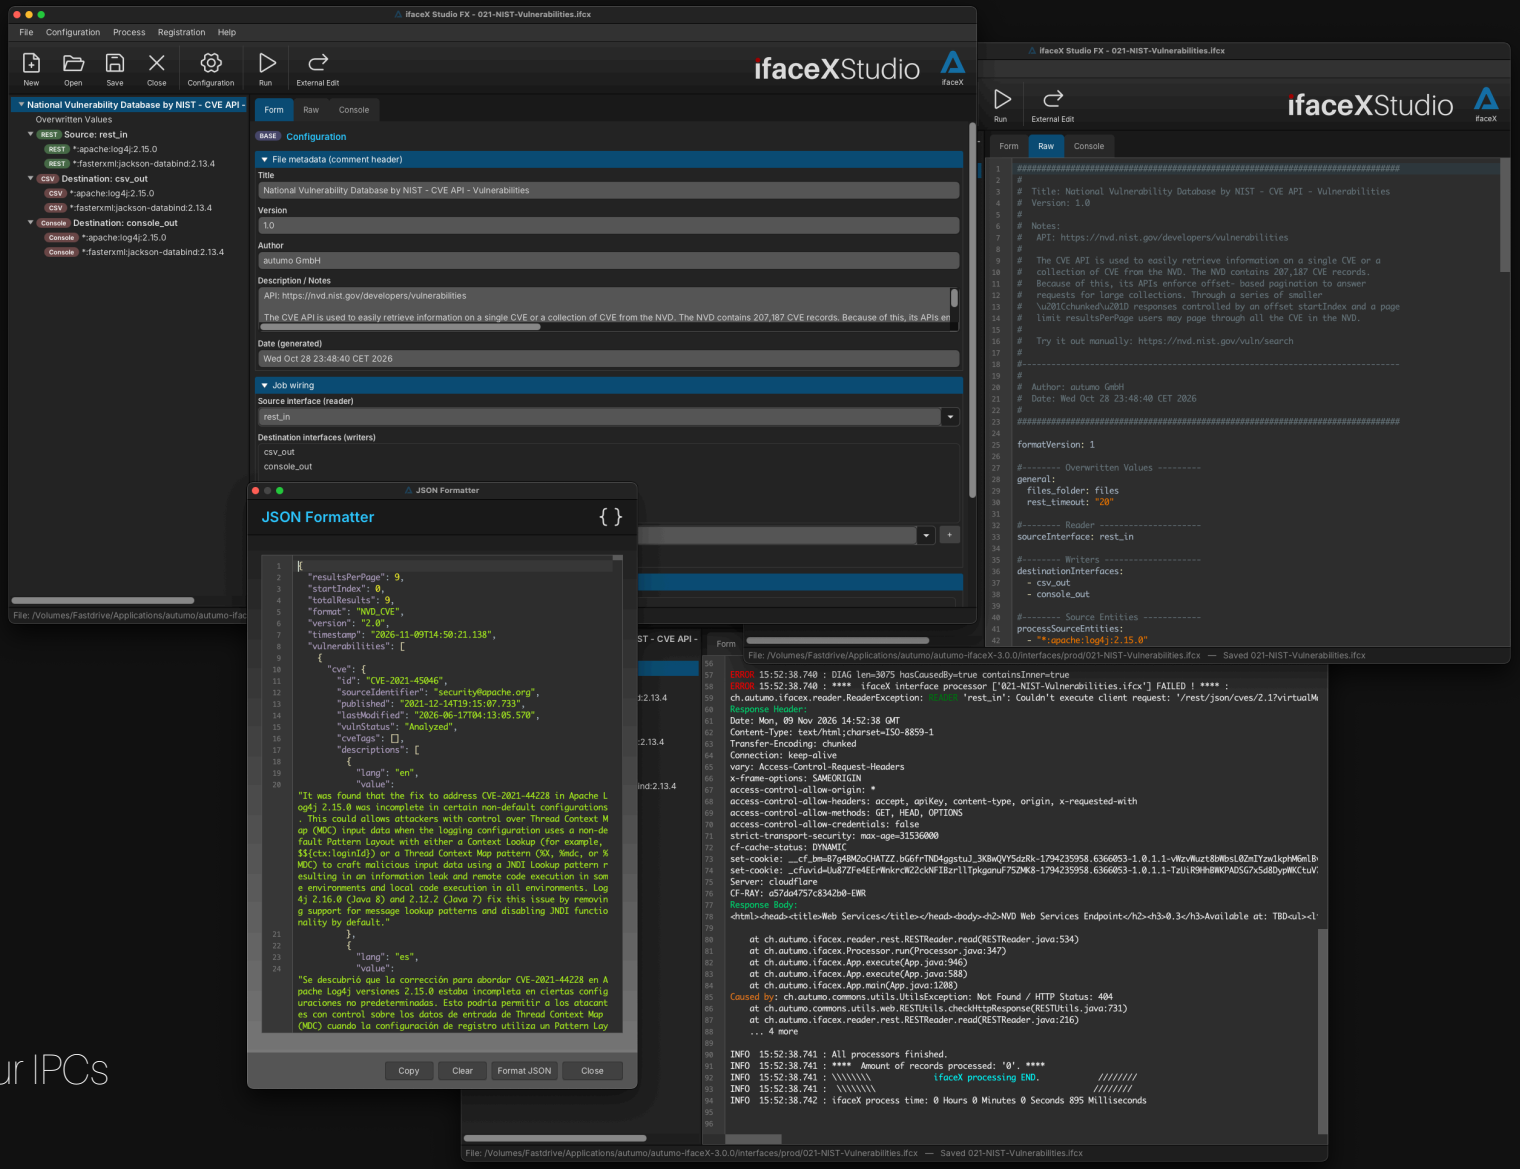

ifaceX Web

- Schedule and surveil your Interface Processors in detail with the scheduler
- Access Interface Processor data (e.g. status) per JSON REST
- Operation monitoring and alarming with threshold levels (Email, SMS & Phone call)
- Available roles: Administrators, Operators & Controllers

ifaceX Studio

- Configure | Develop your IPCs within a GUI
- Configure your ifaceX installation and test your IPCs

ifaceX Console Tools (CLI)

ifaceX includes a set of command-line tools for administrators and operators. They cover the recurring tasks of daily operation: protecting credentials, running individual interface processors, checking the health of the server and operating it as a Windows service. The tools are available as shell and batch scripts.

- Encoder : Encodes passwords, user names, API keys and other sensitive configuration values with strong cryptographic algorithms. The result is stored in the interface processor configuration in the encoded notation `{mode:value}`. The encoder is the command-line counterpart of the encoder in ifaceX Studio FX.
- IPC Runner : Executes a single interface processor that has been created and managed with ifaceX Web or ifaceX Studio, either by name or by its configuration file. The processor runs immediately and independently of its schedule - useful for tests, re-runs and for processing triggered by an external job control.
- Server Health Check : Queries the state of a running ifaceX server. The report shows whether the admin interface, the file server for download and upload and the web server are reachable - a dependable status for operations and monitoring.
- Windows Service Management : Creates, starts, stops and deletes the ifaceX server as a Windows service, configures the automatic start at system boot and supports log rotation as well as thread dumps for troubleshooting.
- Server Start in Console Mode : Starts and stops the server, or runs ifaceX in console mode, for example controlled by the scheduler of the operating system.

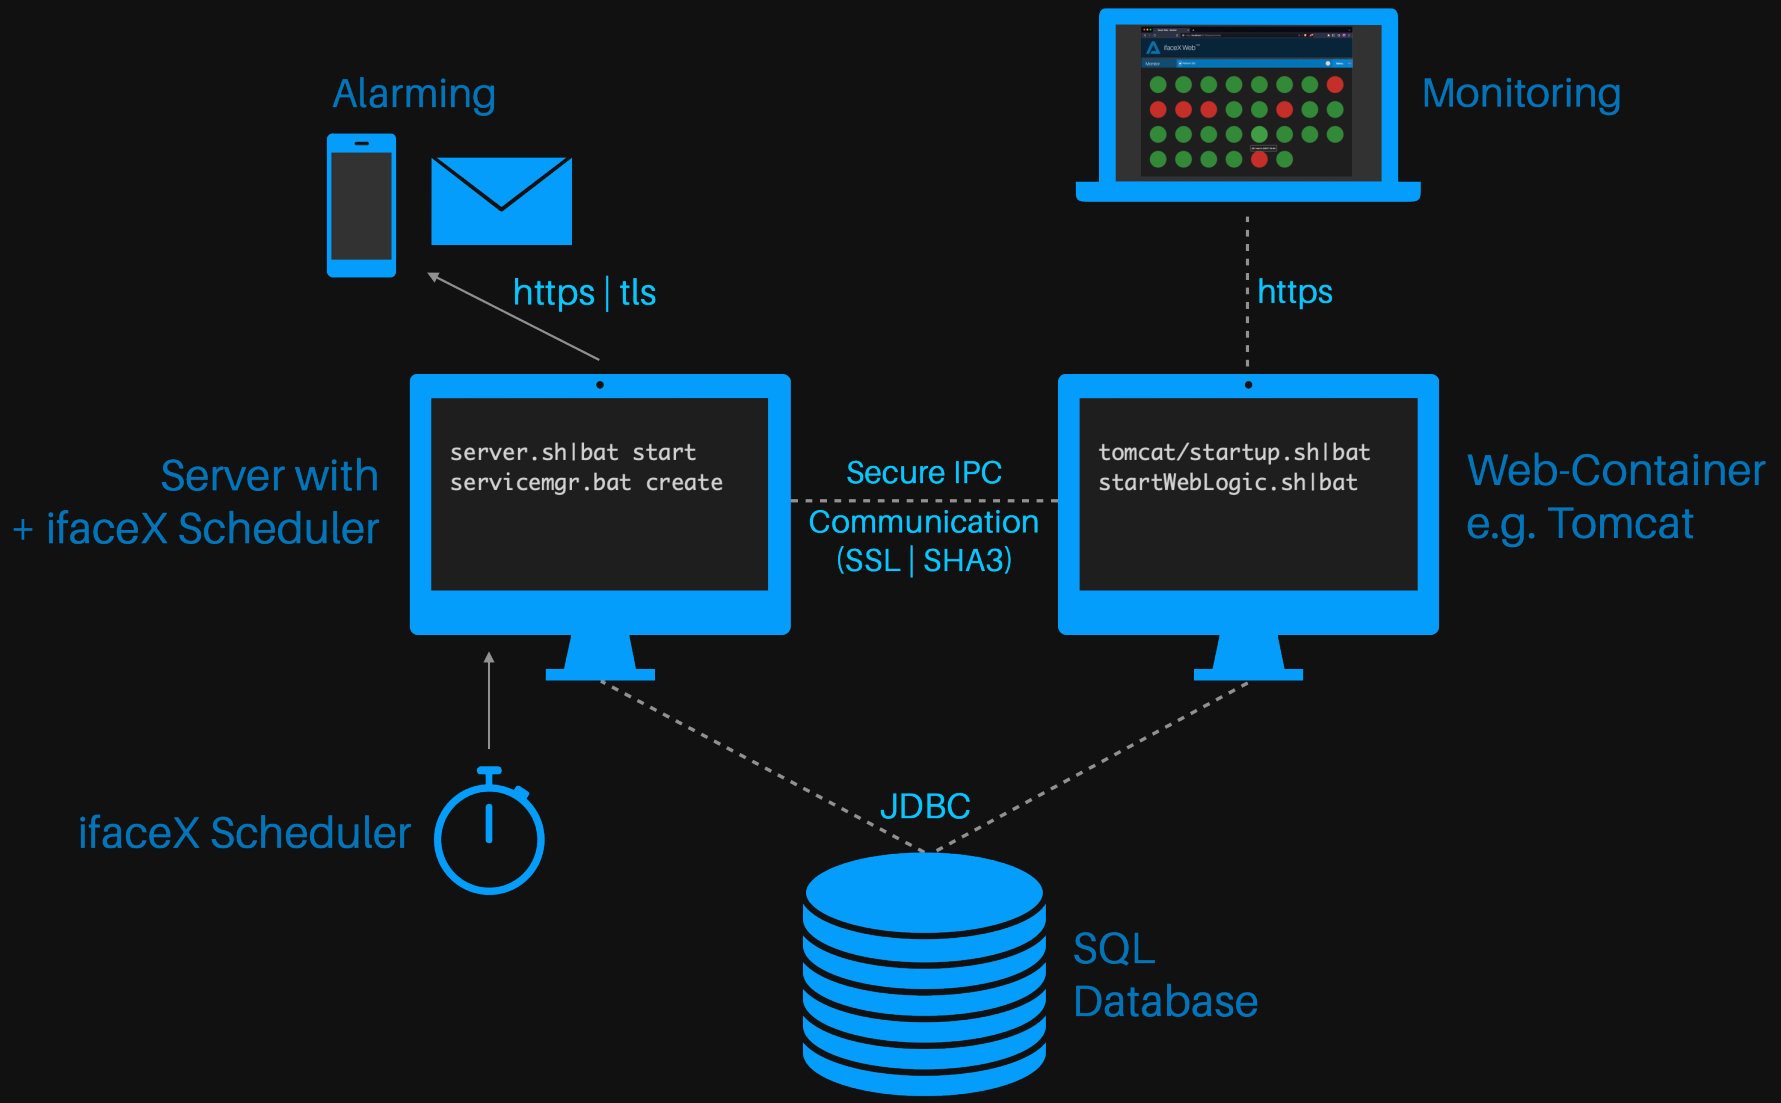

ifaceX Templates

The ifaceX template set contains more than 60 ready-to-use Interface Processor Configuration (IPC) templates. Each template is a complete configuration - REST reader, authentication, pagination, entity and field selection and writer - that only needs your own credentials to run. The templates use the YAML-based .ifcx format of ifaceX 3.0 and can be loaded, adapted and executed in ifaceX Web, ifaceX Studio FX or with the IPC Runner.

- Market and financial data : Polygon, Finnhub, Tiingo, Quandl, CoinDesk and Thomson Reuters Open PermID - tickers, quotes, bars and daily open/close, splits and dividends, IPOs, market status and holidays, company profiles and news, financial statements, insider transactions, earnings and SEC filings, plus technical indicators (SMA, EMA, RSI, MACD).
- Banking and payments : SIX Bank Master, SWIFT BI payments and trades, PayPal transactions, Stripe and Saferpay terminal payment methods.
- CRM, media and sports : HubSpot V3 companies and contacts, Spotify albums and tracks, and the football-data.org API.
- Public sector and security : NIST National Vulnerability Database (CVE API), USPTO patents, USA Spending, Senate Lobbying and H-1B visa applications.
- Integration and operations : Apache NiFi Site-to-Site reader and writer, CSV input, a null reader with the exec writer for external processes, and examples that read the ifaceX Web tasks API from the server or from the web container.

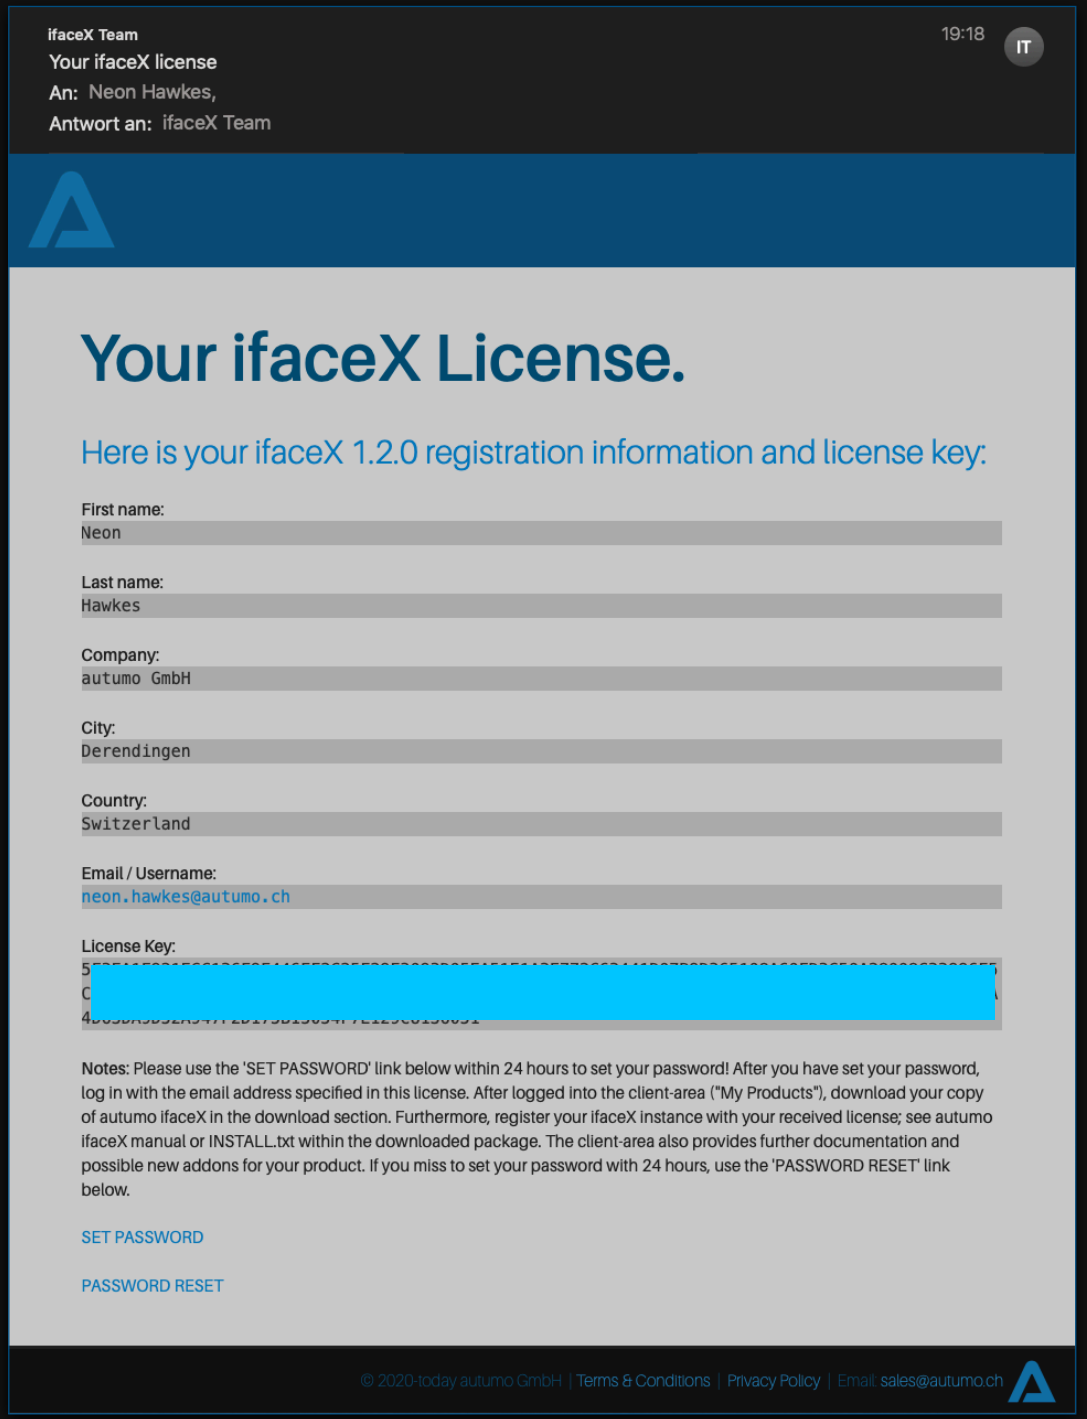

ifaceX Distributed Deployment

- ifaceX Server: Runs the ifaceX Scheduler, executes the alarming
- Web-Container: Runs ifaceX Web, sends Emails for password resets, uses web-container resources

ifaceX Licenses

- Basic Edition with 1 Interface Processor
- Advanced Edition with 5 Interface Processors
- Professional Edition with 10 Interface Processors
- Enterprise Edition with unlimited Interface Processors; major release updates, with a „Developer Reference“ and more

Your ifaceX License.

Here is your ifaceX 1.2.0 registration information and license key:

First name:
Neon

Last name:
Hawkes

Company:
autumo GmbH

City:
Derendingen

Country:
Switzerland

Email / Username:
neon.hawkes@autumo.ch

License Key:

Notes: Please use the 'SET PASSWORD' link below within 24 hours to set your password! After you have set your password, log in with the email address specified in this license. After logged into the client-area ("My Products"), download your copy of autumo ifaceX in the download section. Furthermore, register your ifaceX instance with your received license; see autumo ifaceX manual or INSTALL.txt within the downloaded package. The client-area also provides further documentation and possible new addons for your product. If you miss to set your password with 24 hours, use the 'PASSWORD RESET' link below.

Further Features

- Connects with **Clouds** seamlessly
- Can be used as a **Big Data** mapping & transforming platform too
- Security Features: SSL | TLS | **Argon2** | **SHA-3** | HTTPS | **CSRF** | 2FA | **OAuth 2.0** | Digest | API-Keys
- High **Scalability**: Hosts, OS, Interface Processors, Batches of Data
- **Alarming** with error thresholds: Email, Phone Call or **SMS** to the on-call team
- **Traffic** Light **Monitoring** and **Reporting**
- Execute any **program** and monitor it with ifaceX
- Write your own interface processors or execute your **code** with ifaceX
- Deploys on **any OS** platform, runs everywhere including multiple deployment scenarios
- Runs „as is" and can be **customized** in detail in most versatile ways
- Extended Setups: **Logical Instances** & **Atomic Processing** chains
- Extensive manuals, a **Quickstart** guide, additional **Readers**/**Writers** and many more downloads within a protected **Customer Area**
- ifaceX Web can be deployed within web containers such as Apache **Tomcat** or Oracle **WebLogic** (prebuilt packages) or even runs **independently** in the ifaceX **Server** (stand-alone deployment) without the need for an additional web container
- **Trial** version available!

autumo ifaceX 3.0.0

Leveraging 20 Years of Experience in IT Service Environments, IfaceX Delivers Enterprise Solutions with High Data Throughput, Enhanced Security, and Robust Operational Performance.
